

Save “JAL, JANGAL, ZAMEEN” from hurtful synthetic chemicals

Dr. Sudhanshu Tiwari

Now we are facing second phase of “Green Revolution”-a programme initiated nearly fifty years ago. Results are so terrible and alarming. Indiscriminate use of synthetic chemicals not only increases agricultural production and also increases diseases in man and animals. Researches shows that synthetics are not present in water as total dissolve solids (TDS) but they are also track in blood, milk also. Resulting ill effect on kidney, liver, heart, skin, etc. Reproduction, lactation, egg laying capacity and egg, meat, milk quality are also reduced.

If we see Punjab, in Malava region one person per day infecting by cancer, hepatitis C where as in Gautama Buddha Nagar number of cancer patient is increases day by day, in Allahabad fishes are also became major reason for cancer.

Be awaked not for self but for our upcoming generation and begin to use and develop eco-friendly, plant origin alternatives. If we shall still waiting for Governmental, NGO policy, programme, act for controlling indiscriminate use of harmful chemicals the [opportunity would slips as ‘sand from the hand’ and lastly we will crying and prepare coffins for our offspring.](#)

So, thing about NATURE and our next generation and provide them joy and peace full, prosperous life by keeping pollution/chemical free **“JAL, JANGAL, ZAMEEN”**.
